CONTENTS OF VOLUME 176

NUMBER 1, JANUARY 1989

Review. Practical Aspects of Coupling Enzyme Theory *Stephen P. J. Brooks and Clarence H. Suelter* 1

Repetitive Recycling of Guanosine Triphosphate Cyclohydrolase I for Synthesis of Dihydroneopterin Triphosphate *Juan Ferre, Edwin W. Naylor, and K. Bruce Jacobson* 15

Stopped-Flow Front-Face Fluorometer: A Prototype Design to Measure Hemoglobin R → T Transition Kinetics *Rhoda Elison Hirsch and Ronald L. Nagel* 19

Acid and Base Hydrolysis of Phosphoproteins Bound to Immobilon Facilitates Analysis of Phosphoamino Acids in Gel-Fractionated Proteins *Mark P. Kamps and Bartholomew M. Sefton* 22

Advantages of Firefly Luciferase as a Reporter Gene: Application to the Interleukin-2 Gene Promoter *Thomas M. Williams, Jeanne E. Burlein, Susan Ogden, Larry J. Kricka, and Jeffrey A. Kant* 28

Low Cost Apparatus for Primer-Directed DNA Amplification Using *Thermus aquaticus*-DNA Polymerase *Helge Torgersen, Dieter Blaas, and Tim Skern* 33

Immobilized Artificial Membrane Chromatography: Supports Composed of Membrane Lipids *Charles Pidgeon and U. V. Venkataram* 36

A Human Liver Alcohol Dehydrogenase Enzyme-Linked Immunosorbent Assay Method Specific for Class I, II, and III Isozymes *Philippe Montavon, Jean-Pierre Felber, Barton Holmquist, and Bert L. Vallee* 48

A Rapid Diethylaminoethyl Paper Disk Assay for Transfer RNA Sulfurtransferase *Charles L. Harris and Christopher J. Kolanko* 57

Automated Analysis of 2,3-Diamino-2,3-dideoxy-D-glucuronic Acid by Cation Exchange Chromatography with Fluorometric Postcolumn Derivatization *Mary F. Verostek, Lee E. Bartholomew, and Peter Weber* 63

Immunoquantitation of Aldose Reductase in Human Tissues *Charles E. Grimshaw and Eric J. Mathur* 66

Simultaneous Determination of Reducing Monosaccharides by Capillary Zone Electrophoresis as the Borate Complexes of *N*-2-Pyridylglycamines *Susumu Honda, Shigefumi Iwase, Akiko Makino, and Shigeru Fujiwara* 72

A Colony-Blot Technique for the Detection of Specific Transcripts in Eukaryotes *Markus Maniak, Uschi Saur, and Wolfgang Nellen* 78

Synthesis of Radiolabeled Acetyl-Coenzyme A from Sodium Acetate *Richard C. Clough, Susan R. Barnum, and Jan G. Jaworski* 82

Measurement of Urinary Free and Acylcarnitines: Quantitative Acylcarnitine Profiling in Normal Humans and in Several Patients with Metabolic Errors *J. A. Montgomery and O. A. Mamer* 85

The Disaccharide Composition of Heparins and Heparan Sulfates *Yuchuan Guo and H. Edward Conrad* 96

An Assay for Dihydroorotase Using High-Performance Liquid Chromatography with Radioactivity Detection *Shujaath Mehdi and Jeffrey S. Wiseman* 105

Anion Exchange Chromatographic Separation of Inositol Phosphates and Their Quantification by Gas Chromatography *Guy P. Heathers, Twyla Juehne, Leona J. Rubin, Peter B. Corr, and Alex S. Evers* 109

Efficient Simplified Cosmid Cloning: Construction and Characterization of Cosmid Vectors That Carry the Two Cohesive End Sites of λ Phages Arrayed in Tandem *Masahiro Ishiura, Hiroshi Ohashi, Tsuyoshi Uchida, and Yoshio Okada* 117

Fluorophotometric Quantitation of DNA in Articular Cartilage Utilizing Hoechst 33258 *Jack M. Lipman* 128

A Direct High-Performance Liquid Chromatography Assay of the Enzymatic Activity of Enterokinase (Enteropeptidase) *Hanna Janska and Albert Light* 132

Diffuse Reflectance Infrared Fourier Transform Spectroscopic Characterization of a Silica-Immobilized *N*-Hydroxysuccinimide Active Ester Crosslinking Agent and Its Precursors *W. S. Warner, B. J. Tenge, J. M. Hungerford, and D. E. Honigs* 137

A Spectroscopic Collagenase Assay Using Peroxidase-Labeled Collagen
Michael Kasten, Harald Burkhardt, Hans-Jörg von Roden, and Silke Rauls 150

An Inexpensive Small Volume Equilibrium Dialysis System for Protein–Ligand Binding Assays
Thomas Reinard and Hans-Jörg Jacobsen 157

Evaluation of Uncertainties for Parameters in Binding Studies: The Sum-of-Squares Profile and Monte Carlo Estimation *Harry A. Saroff* 161

The Involvement of Superoxide Anions in the Nitro Blue Tetrazolium Chloride Reduction Mediated by NADH and Phenazine Methosulfate *Cornelis J. F. Van Noorden and Roger G. Butcher* 170

Ribonuclease Inhibitor from Pig Brain: Purification, Characterization, and Direct Spectrophotometric Assay
Sungwoo Cho and J. G. Joshi 175

Continuous Spectrophotometric Assay of Phospholipase A_2 Activity Hydrolyzing Plasmalogens Using Coupling Enzymes
Yutaka Hirashima, Marianne S. Jurkowitz-Alexander, Akhlaq A. Farooqui, and Lloyd A. Horrocks 180

Quantitation of a Guanine Nucleotide Binding Regulatory Protein by an Enzyme-Linked Immunosorbent Competition Assay *Lennart A. Ransnäs and Paul A. Insel* 185

Reversible Conversion of Octadecyl-Bonded Silica to Ion-Exchange Surfaces for Protein Separations
D. E. Keller, J. L. Torres, R. G. Carbonell, and P. K. Kilpatrick 191

An Osmometer for Aqueous Biopolymer Solutions *Hansjürgen Schönert and Jean-Jacques Origer* 217

Determination of Acetylcholine and Choline by Flow-Injection with Immobilized Enzymes and Fluorometric or Luminometric Detection *Jan Říčný, Jiří Čoupek, and Stanislav Tuček* 221

An NADH-Linked Luciferase Assay for Glycogen: The Preparation of Glycogen-Free, Viable Human Eccrine Sweat Glands *Christine Welch, Arthur Bryant, and Terence Kealey* 228

Immobilized Enzyme Assay of Creatine Kinase with Amperometric Detection *Tekum Fonong* 234

Measurement of Casein Digestion by a Fluorometric Method
Pedro Ostoa-Saloma, Jorge Ramírez, and Ruy Perez-Montfort 239

Sanfilippo D Syndrome: Estimation of *N*-Acetylglucosamine-6-sulfatase Activity with a Radiolabeled Monosulfated Disaccharide Substrate *Craig Freeman and John J. Hopwood* 244

Gamma Globulin-Derived Standards for the Determination of Molecular Weights, Transfer, and Immunodetection Efficiencies in Protein Blotting Procedures
Jeffrey R. Davies, C. M. Gilbo, P. B. Marley, and Milton T. W. Hearn 249

Strong-Cation-Exchange Sulfoethyl Aspartamide Chromatography for Peptide Mapping of *Staphylococcus aureus* V8 Protein Digests
Dan L. Crimmins, Richard S. Thoma, Dave W. McCourt, and Benjamin D. Schwartz 255

Self-Quenched Fluorogenic Protein Substrates for the Detection of Cathepsin D and Other Protease Activities
James D. Ashcom and Lewis A. Jacobson 261

Determination of the A–T Content of DNA by Second-Derivative Ultraviolet Spectroscopy
Roland Marquet and Claude Houssier 265

Identification of Phenylthiocarbamyl Amino Acids for Compositional Analysis by Thermospray Liquid Chromatography/Mass Spectrometry
Bikash C. Pramanik, Carolyn R. Moomaw, Claudia T. Evans, Steven A. Cohen, and Clive A. Slaughter 269

Recovery of Active Ribosomal Complexes from Cellulose Nitrate Membranes
Dimitrios A. Theocharis and Charalambos Coutsogeorgopoulos 278

An Optimized Procedure for Sodium Dodecyl Sulfate–Polyacrylamide Gel Electrophoresis Analysis of Hydrophobic Peptides from an Integral Membrane Protein *John P. Hennessey, Jr. and Gene A. Scarborough* 284

A Radiochemical–High-Performance Liquid Chromatographic Assay for Urate Oxidase in Human Plasma
Michael L. Greenberg and Michael S. Hershfield 290

Radioactive-Electrophoretic Assay of Adenosine 5′-Triphosphate Sulfurylase Activity in Crude Extracts with Sulfate or Selenate as a Substrate *M. Leslie Hanna and Robert T. Taylor* 294

Preparation of RNA from Unspheroplasted Yeast Cells (*Saccharomyces cerevisiae*)
Catherine M. McEntee and Alan P. Hudson 303

Use of Multiple ^{13}C-Labeling Strategies and ^{13}C NMR to Detect Low Levels of Exogenous Metabolites in the Presence of Large Endogenous Pools: Measurement of Glucose Turnover in a Human Subject
James R. Brainard, Richard S. Downey, Dennis M. Bier, and Robert E. London 307

Logarithmic Timebase for Stopped-Flow Data Acquisition and Analysis
Adrian R. Walmsley and Clive R. Bagshaw 313

The Synthesis and Use of Activated *N*-Benzyl Derivatives of Diethylenetriaminetetraacetic Acids: Alternative Reagents for Labeling of Antibodies with Metal Ions *V.-M. Mukkala, H. Mikola, and I. Hemmilä* 319

Purification and Structural Characterization of Recombinant Rat γ-Interferon from *Escherichia coli*
Chun-Yen Lai, Elizabeth Dharm, and Yutaka Fujii 326

Covalent Chromatography and Salt-Promoted Thiophilic Adsorption *Sven Oscarsson and Jerker Porath* 330

Separation of Hepatocyte Plasma Membrane Domains by Free Flow Electrophoresis
Carla Evers, Peter J. Meier, Jürg Biber, and Heini Murer 338

A New Method of Plasmid DNA Preparation by Sucrose-Mediated Detergent Lysis from *Escherichia coli* (Gram-Negative) and *Staphylococcus aureus* (Gram-Positive)
Biswajit Saha, Dilip Saha, Saswati Niyogi, and Manjusri Bal 344

Microgel Immunoblotting of Thymus and Nuclear Extracts by Unidirectional Diffusion
F. De Keyser, G. Verbruggen, E. Veys, F. Luyten, J. Segers, and M. Rabaey 350

A Continuous-Flow Automated Assay for Iodometric Estimation of Hydroperoxides
Sian M. Thomas, Wendy Jessup, Janusz M. Gebicki, and Roger T. Dean 353

Spectrophotometric and High-Performance Chromatographic Assays of Hydroperoxides by the Iodometric Technique *Janusz M. Gebicki and Jennifer Guille* 360

Modified Method for Peptide Mapping of Collagen Chains Using Cyanogen Bromide-Cleavage of Protein within Polyacrylamide Gels *B. P. Sokolov, B. M. Sher, and V. N. Kalinin* 365

Isolation and Identification of Free Amino Acids as Crystalline *N*-*t*-Butyloxycarbonyl, *O*-Phenacyl Derivatives *Greg Lonergan, Christina Psachoulia, Vassilis Marmaras, John Hondrelis, Chariklia Sanida, and John Matsoukas* 368

Large Scale Preparation of Bacteriophage λ by Tangential Flow Ultrafiltration for Isolation of λ DNA
G. W. Rembhotkar and G. S. Khatri 373

Glycerol, Sodium Phosphate, and Sodium Chloride Permit the Solubilization and Partial Purification of Rat Hepatic α_1-Receptors by 3-(3-Cholamidylpropyl)-dimethylammonio-1-propanesulfonate
Angelo Parini and Robert M. Graham 375

Determination of [U-^{13}C]Glucose Turnover into Various Metabolite Pools for the Differential Diagnosis of Lactic Acidemias *D. B. Kassel, M. Glerum, B. H. Robinson, and C. C. Sweeley* 382

A Simple Colorimetric Assay Method for Pyrophosphate in the Presence of a 1000-Fold Excess of Orthophosphate: Application of the Method to the Study of Pyrophosphate Metabolism in Mitochondria
Svetlana E. Mansurova and Olga A. Deryabina 390

Nonisotopic Evaluation of Collagen in Fibroblasts Cultures
V. Monboisse, J. C. Monboisse, J. P. Borel, and A. Randoux 395

Ultraviolet Scanning Densitometry for Detection, Quantitation, and Preparative Elution of Protein Bands from Unstained Gels *Paolo Bartolini, Rosangela Arkaten, and Maria Teresa Ribela* 400

A Rapid and Specific Extraction Procedure for Folates Determination in Rat Liver and Analysis by High-Performance Liquid Chromatography with Fluorometric Detection
Jean-Claude Gounelle, Hamed Ladjimi, and Patrice Prognon 406

Assay of Strictosidine Synthase from Plant Cell Cultures by High-Performance Liquid Chromatography
Ed J. M. Pennings, Renée A. van den Bosch, Robert van der Heijden, Luc H. Stevens, Johannis A. Duine, and Robert Verpoorte 412

Limitation of DNA-4′, 6-Diamidine-2-phenylindole Assay in the Presence of an Excess of tRNA
Mehrnaz Katouzian-Safadi, Jean-Yves Cremet, and Michel Charlier 416

Generic Liposome Reagent for Immunoassays
Anne L. Plant, Marius V. Brizgys, Laurie Locasio-Brown, and R. A. Durst 420

A General Pre-steady-state Solution to Complex Kinetic Mechanisms
Xue-Zhong Zhang, Arne Strand, and Howard D. White 427

Determination of Trehalose in Biological Samples by a Simple and Stable Trehalase Preparation
P. S. Araujo, Ana C. Panek, R. Ferreira, and Anita D. Panek 432

High-Performance Liquid Chromatography Determination of Enzyme Activities in the Presence of Small Amounts of Product *Mario Pace, Pierluigi Mauri, Piergiorgio Pietta, and Dario Agnellini* 437

Rhodamine B-Labeled Thyroid Hormone Forms High Molecular Weight Aggregates in Solution: A Possible Source of Artifacts in Binding Experiments *Sheue-Yann Cheng and Peter McPhie* 440

Double Mixing Technique for Linked Enzyme Assays *Ralf Landgraf and Graham F. Betts* 444

Microanalysis of the Metabolic Intermediates of Lactose Synthesis in Human Milk and Plasma Using Bioluminescent Methods *Peter G. Arthur, Jacqueline C. Kent, and Peter E. Hartmann* 449

Two Dimensional Benzyldimethyl-*n*-hexadecylammonium Chloride → Sodium Dodecyl Sulfate Preparative Polyacrylamide Gel Electrophoresis: A High Capacity High Resolution Technique for the Purification of Proteins from Complex Mixtures *Donald E. Macfarlane* 457

A Procedure for the Preparation of Bacterial DNA That Employs Dimethyl Sulfoxide to Induce the Lysis of Cells *N. Van Huynh, O. De Backer, M. Decleire, and C. Colson* 464

AUTHOR INDEX FOR VOLUME 176 468

NOTICE

The Subject Index for Volume 176 will appear in the December 1989 issue as part of a cumulative index for the year 1989.

ANALYTICAL BIOCHEMISTRY

Methods in the Biological Sciences

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in **Analytical Biochemistry** represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to:

Analytical Biochemistry

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Instructions to Authors is published in the July issue during odd-numbered years. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), the address to which proof should be mailed, and the corresponding author's telephone number and fax or telex number. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title. Please number all pages of the manuscript. The appropriate subject category should be indicated on the title page.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Joint Combined Commission on Biochemical Nomenclature (JCBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal during odd-numbered years.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. Simple histograms should be avoided. A table or a paragraph in the text is preferred.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162,** 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) *in* Methods in Enzymology (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.

For information about advertising in *Analytical Biochemistry*, please contact Calvin Caldwell, Advertising Coordinator, Journal Promotion Department, Academic Press, Inc., 1250 Sixth Avenue, San Diego, California 92101 (telephone: (619) 230-1840).
